Test	Results	Reference Range	Low	Normal	High
HCT:	The hematocrit in this patient is <27. (Normal range 29-48). A recent study has indicated that >23% of anemic cats are infected with one or more species of hemoplasma and several studies confirm that PCR is significantly more sensitive in detecting hemoplasma. Antech now offers a Feline Hemoplasma (mycoplasma) PCR panel for detection of <i>M. haemofelis</i> , <i>M. haemominutum</i> and <i>M. turicensis</i> . To add this follow up test, please call customer service and request test code T985.
