**17 April 2018**

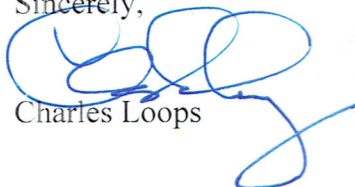

Dear Carla,

I have enclosed three bottles of homeopathic remedies for Simba to begin taking. Give one dose morning and night on the first and third day of the Aurum metallicum LM/6 / Phytolacca 30C Combo. On the second and fourth day give morning and night doses of the Nitric acidum LM/3 / Hydrastis 30C Combo. Each fifth day, give two doses of the Carcinosis plus 200C instead. Continue repeating this five-day protocol as above.

I have also enclosed a packet of a special Cell Salt Combination. Give approximately 1/8 teaspoon, twice daily, before giving the remedy dose above. If you can, wait fifteen minutes or more between the Cell Salts and the liquid remedy dose. This small amount of powder can be rubbed on the gums or placed in the lip pocket or it can be dissolved in a small amount of water and placed in the mouth.

Let me know in about two to three weeks how Simba is doing. Call sooner if you have any questions

Sincerely,

Charles Loops

## C and X Potency Instructions

For: Simba

Remedies: Aurum metallicum LM/6 / Phytolacca 30C Combo, Nitric acidum LM/3 / Hydrastis 30C Combo, Carcinosin plus 200C

You have received a stock bottle(s) of a homeopathic remedy(s). Each time you prepare a dosing solution, the following instructions will apply:

1. Place **6 drops** of this remedy stock solution in a clean glass or disposable cup with 1 oz. (2 Tablespoons) of distilled or spring water. Stir vigorously with a clean spoon and give 2 ml (1/2 teaspoon) as your dose using the enclosed syringe. Use a separate **dosing syringe for each remedy**. The purpose in giving this quantity is to bathe the mouth with the medicine. It is not necessary to swallow any of this. Each dose can be added to a small amount of milk or cream (1/2 teaspoon), if necessary. **This dilution should only be used the day it is made, but it can be used for other doses given the same day.** Cover the mixture between doses and stir gently before giving each dose. Give the remainder of this mixture to your houseplants each day, especially the ones that might not be thriving.
2. It is very important to use the 6 drops/ 1oz. quantity. I am aware that the medicine can be extended by halving this quantity, but the number of doses per bottle is calculated at that potency for a reason. Giving extra doses can interfere with your companion's progress and response to the remedy.

### **Give one dose as directed**

3. As with all homeopathic remedies, do not give the remedy within 5-10 minutes of eating or drinking.
4. Medicines should be stored away from direct sunlight at room temperature. They should not be stored close to microwaves, televisions, computers, or other electronic devices for any extended period of time. Avoid opening the bottles when strong aromatic odors are present in the room.
